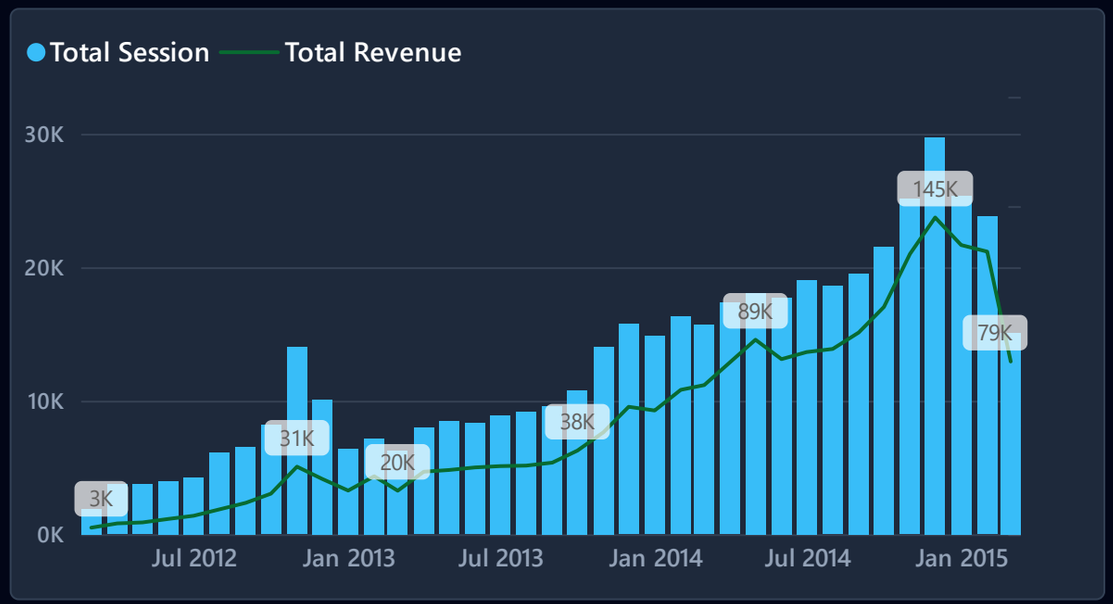
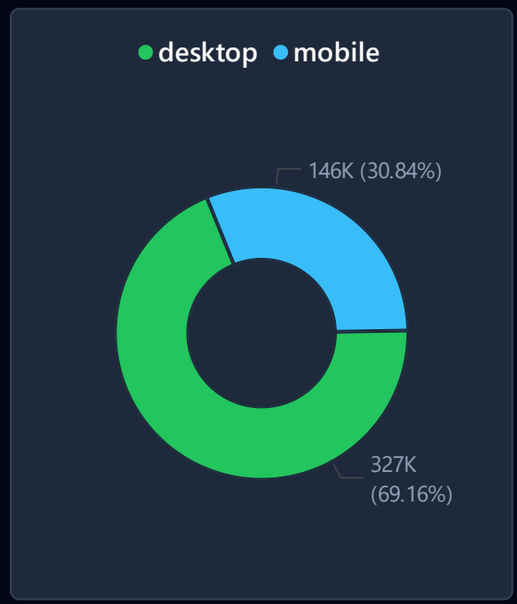
Monthly Performance Overview



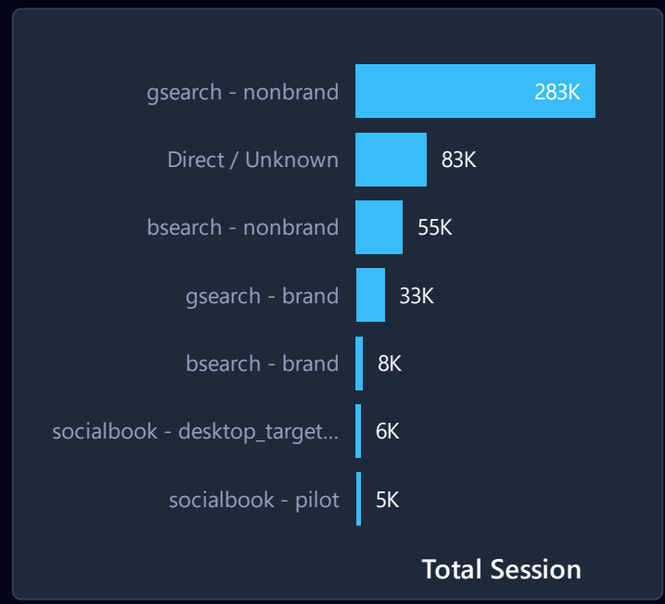
Sessions and revenue show consistent growth, with peaks reaching **145K sessions**, likely driven by seasonal demand.
The **rapid growth** in revenue and sessions during the **final months of each year** is likely attributable to Christmas or the New Year.

Sessions by Device



User behavior analysis shows that the majority of traffic comes from **desktop** devices **(approximately 69%)**, while **mobile** accounts for around **31%**.
While desktop dominates, mobile optimization represents a significant area for future growth.

Top Traffic Sources



From a marketing perspective, '**Google Search without a brand**' (gsearch no brand) serves as the primary source of traffic, accounting for the vast majority of sessions.
Immediately following this are numerous other traffic sources originating from **unknown channels**.
Non-brand search dominates traffic, indicating strong acquisition but low brand recognition.

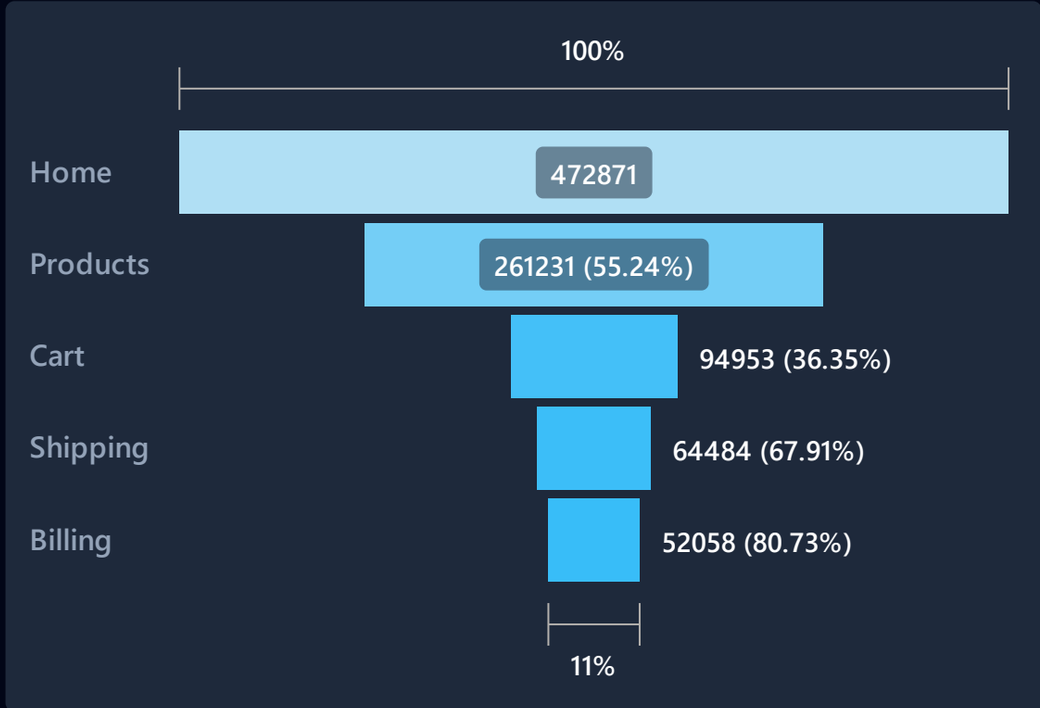
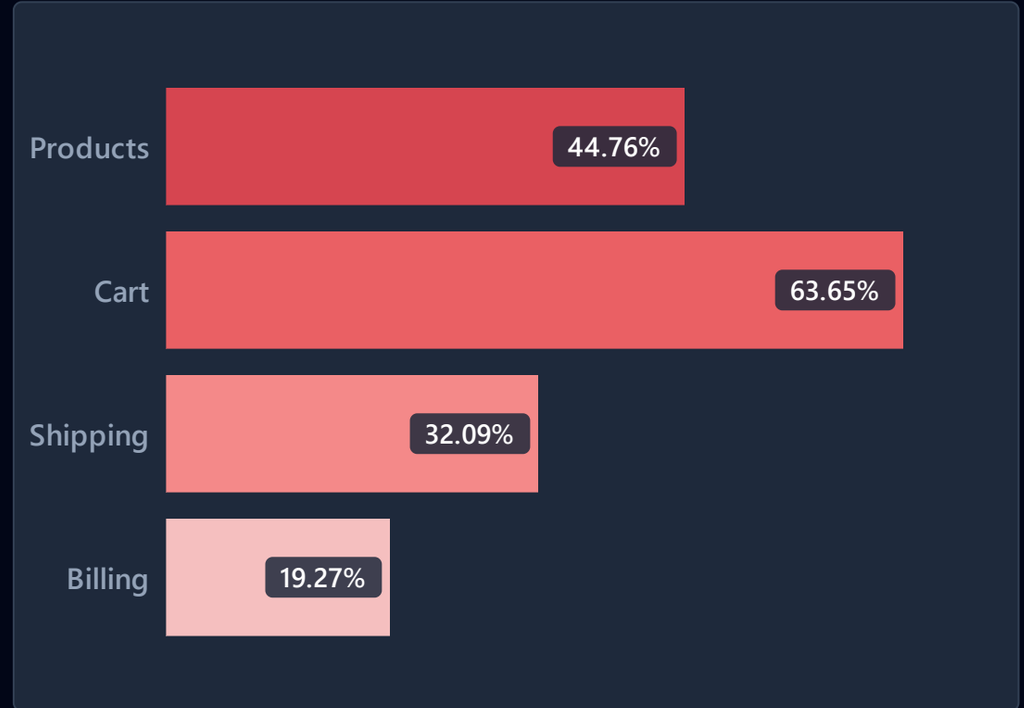
Conversion Funnel



Drop-off Rate by Stage



- Although a vast number of users begin at the **homepage (472,000 sessions)**, only approximately **55%** of them proceed to the product pages. The most drastic drop-off occurs between the **product and cart stages (~64%)**.
- However, the rate of user drop-off after moving from the cart to the **shipping stage** is relatively **low (~32%)**. Interestingly, the drop-off rate at the **billing stage (~19%)** is also comparatively **low**.
- Overall, the funnel indicates that the primary opportunity for optimization lies in **increasing** engagement on the **product pages** and encouraging users to initiate the purchasing process. Improving product presentation, offers, and trust signals could significantly boost conversion rates.

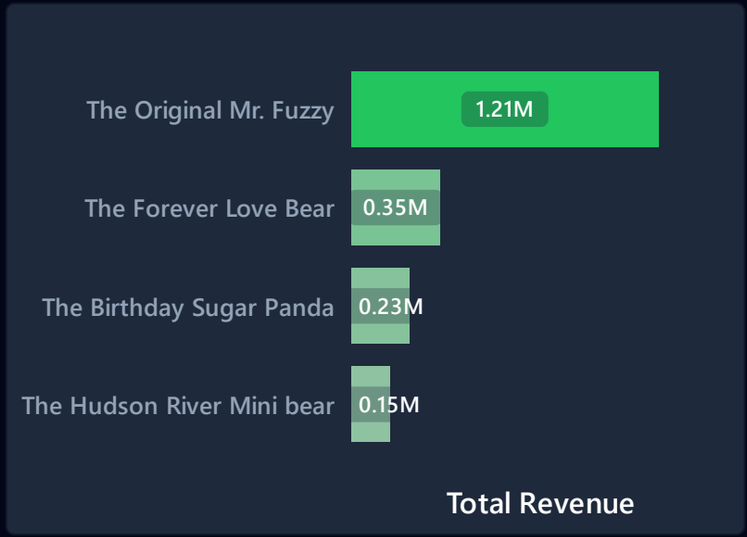
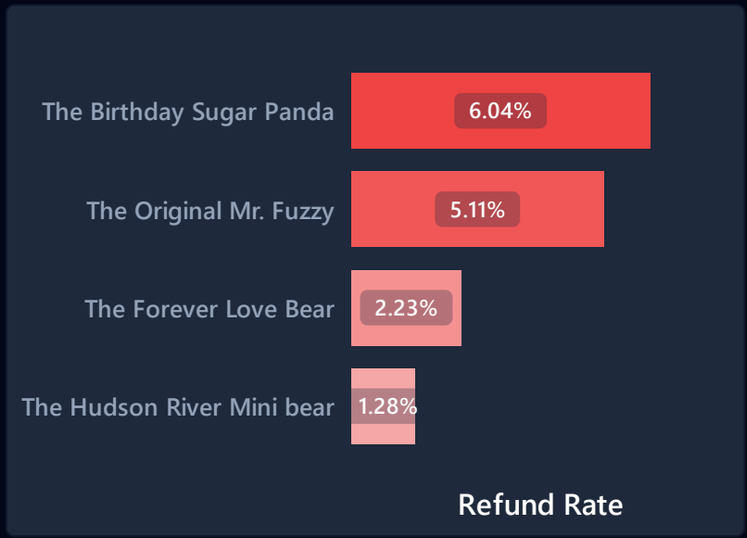
Product Performance & Revenue Analysis





- "**The Original Mr. Fuzzy**" generates the **highest revenue** and also **ranks first** in terms of **total order** volume.
- Products such as "**The Birthday Sugar Panda**" and "**The Original Mr. Fuzzy**" exhibit comparatively **higher refund** rates than others.
- From a financial perspective, "**The Original Mr. Fuzzy**" also **tops** the list regarding **revenue losses** incurred due to refunds.
- In summary, although **top-tier products** undoubtedly drive business **growth**, the high rate of **refunds**—and the resulting **revenue loss**—strongly underscores a critical necessity: to sustain profitability, it is imperative to enhance product quality, ensure customer satisfaction, and effectively manage customer expectations.

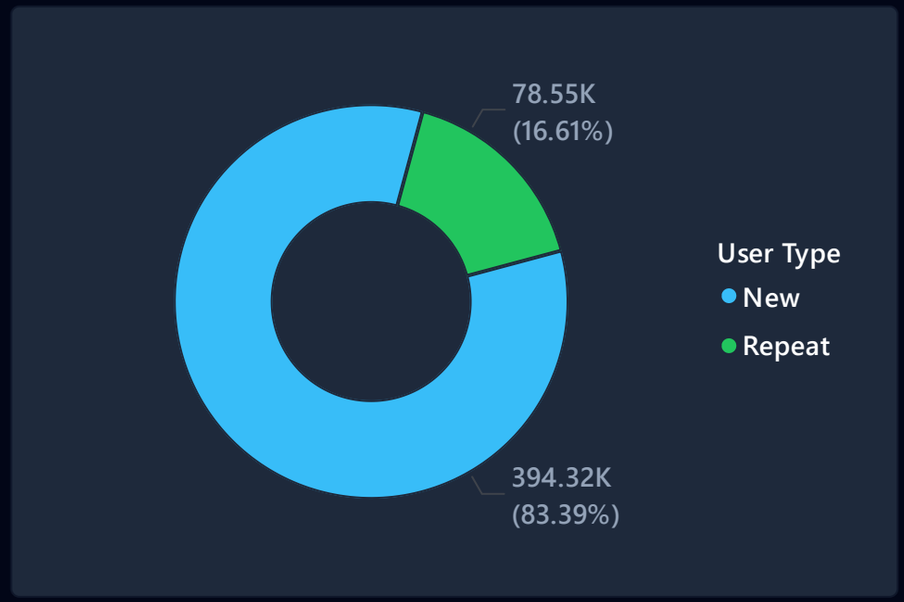
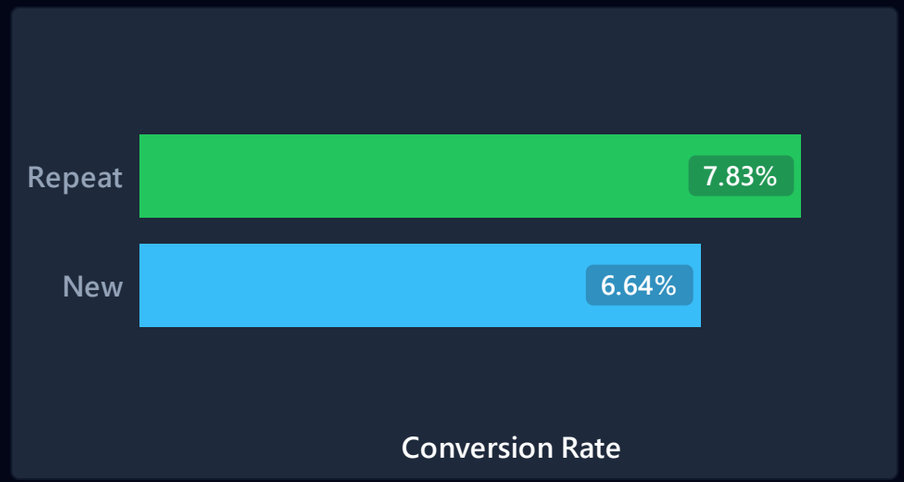
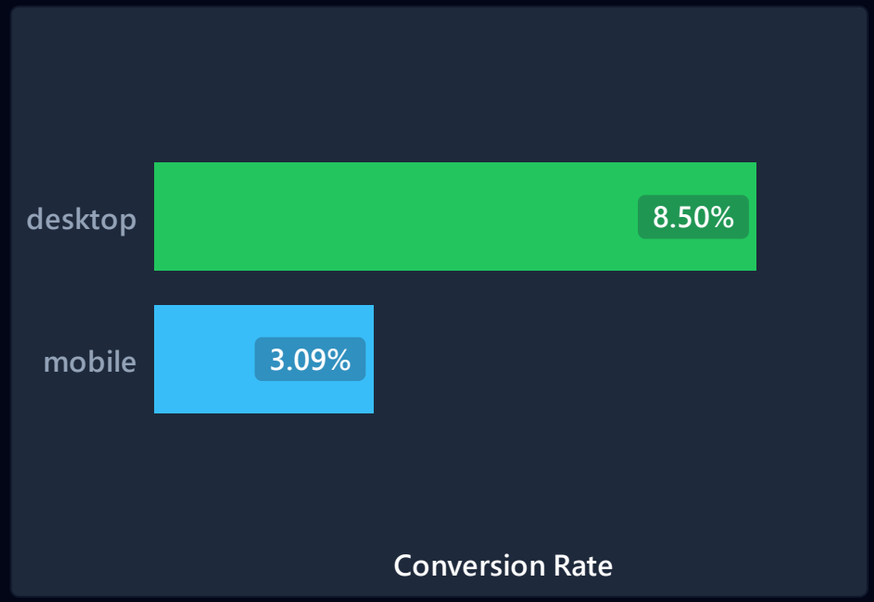
User Behavior & Conversion





Device-wise Conversion Performance



2.51
Avg Pages per Session

1.24
Avg Items per Order

- The user behavior analysis shows that a **majority of sessions** are driven by **new users**, accounting for approximately **83%** of total traffic, while **repeat users** contribute around **17%**.
- Despite lower volume, **repeat users** demonstrate a **higher conversion rate (~7.8%)** compared to **new users (~6.6%)**.
- From a device perspective, **desktop** users significantly outperform **mobile** users, with a conversion rate of approximately **8. 5%** compared to **3.1%** on **mobile**.
- Engagement metrics further reveal that users view an average of **2.5 pages per session** and purchase around **1.24 items per order**.
- Overall, the analysis highlights that while **new users** drive **traffic**, **repeat users** drive **conversions**. Improving mobile experience and increasing engagement depth could significantly enhance overall conversion performance and revenue.
